PROOFING MOCK-UP

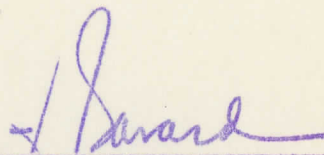

The Proofing Mock-up is a metal structure intended to be used as a production tool.

The Proofing Mock-up will be used to develop those physical areas and elements which require proofing prior to tooling approvals. Examples are electrical harnesses, tubing and routing, duct routing and supports, control system routing, etc.

Unless specifically approved by Production Proofing Department, no engineering design mock-up or system function shall be considered or scheduled for the Proofing Mock-up.
